Workstation Specification Report Progress

Brent Matthew Lloren

During Week 3, I completed my Hardware Identification Sheet, documenting my workstation's hardware components, including the processor, RAM, storage, network adapter, monitor, keyboard, and mouse. I also documented OS-specific information.

I organized this information in my Hardware Identification Sheet, which I will use as a reference for future reports.

For Week 4, I deployed Windows Server 2025 Datacenter through Pluralsight and verified its operating system, hardware, storage, and network configuration using similar techniques I learned during Week 3.

I have not created any additional tables or diagrams yet.
